

Replacement of Carpenter Bridge

May 2009

Carpenter Bridge, east of Lake Stevens, on Sanders Road needs to be replaced. It was built in 1984 and was added to the replacement list after an inspection in late 2008 revealed structural deficiencies. A load restriction was placed on the bridge and will remain until the new bridge is in place.

The bridge will be closed beginning late May or in June 2009. A full bridge closure will be required for an estimated three weeks for construction. A temporary pedestrian bridge will be installed to allow access to area homes while the new bridge is being built.

The project will replace bridge rails, deck and supporting structure. When finished, the new bridge will be a single-lane steel and timber structure capable of carrying legal limit load vehicles. The County has concluded a survey of the bridge and the adjacent area. We will send you more information once construction dates are confirmed.
